

Stoutland R-2 is beginning the process of testing the water outlets used for drinking/cooking school wide.

We are working with an outside source to begin testing early 2024. These results will be available after the results are given on our school website. This is part of the RSMo 160.077: Get the lead out of School Drinking Water Act.

Information on this process can be found online at the Missouri Department of Health and Senior Services. There you can find the information on health effects of lead to the public.
